

Module 3

Ubiquitous connectivity - Salesforce

Overview

In this **module**, we will create the implementation of our Customer System API that will provide a REST interface to the **Customer Relationship Management (CRM) system**. The Customer API will use Salesforce as the system of record and each customer will be represented as a Salesforce Account.

The Module is separated in three different labs.

- [Lab 1: Implement the Customer API in Studio](#)
- [Lab 2: Implement the customer creation logic](#)
- [Lab 3: Run the Mule app from Anypoint Studio](#)

Please proceed to [Lab 1](#)
